

You must make a decision which will alter the course of humanity **IMMEDIATELY** or life on earth as we know it will forever be altered.

"DO YOU SUPPORT THE OIL CORPORATION, SHELL DRILLING FOR OIL IN THE ARCTIC?"

I, personally, do not and I hope you take the time to find out **why**.

- * First, I do not want to pass on a ruined planet to my children.
- * Second, I believe it is my **duty** to protect this earth we call home.
- * **Third, we have other options.**

I believe we share the responsibility to protect our home.

The Polar Pioneer and Noble Discoverer are the two oil rigs that form Royal Dutch Shell Oil's chosen crew for the murder of our present and future. This is a direct continuation of Manifest Destiny. The intended arctic drilling operation of Shell would fuel our planet's 6th mass extinction as well as global climate changes favorable to a new form of extreme gentrification and modern-day colonization.

4 Reasons Why

- ◆ The local wildlife is very vulnerable to oil. The executive director of the steering committee for the Native Alaskan and Canadian Gwich'in tribe says, "60 to 70 percent of our diet comes from the land and caribou is one of the primary animals that we depend on for sustenance."
- ◆ According to a senior official at a Canadian firm specializing in oil spill response, "there is really no solution or method today that we're aware of that can actually recover [spilt] oil from the Arctic."
- ◆ The US Geological Survey estimates these giant, rusting rigs drilling in the Arctic would only satisfy three years of the world's oil demand.
- ◆ Drilling in the Arctic Circle will push the global warming rate past the 2 degrees rate of temperature change, precipitating a range of 40 degree temperature changes globally. Seattle would become a refuge as its climate would be akin to Southern California.

Right NOW in the Port of Seattle in OCCUPIED DUWAMISH AND SUQUAMISH TERRITORY sit these death-machines scheduled to sail north June 10th. They will miss the drilling season if they are delayed past June 30th. The politicians and the CEO's are arguing over the last bits of you and your children's future. The rich will use their monopoly on "energy resources" to maintain artificial climates where they may survive in the hell created by Shell. If we do not act now, those left outside of their first world borders will suffer from corporate pillage of the planet.

What is your say in the matter?
